#### Summary

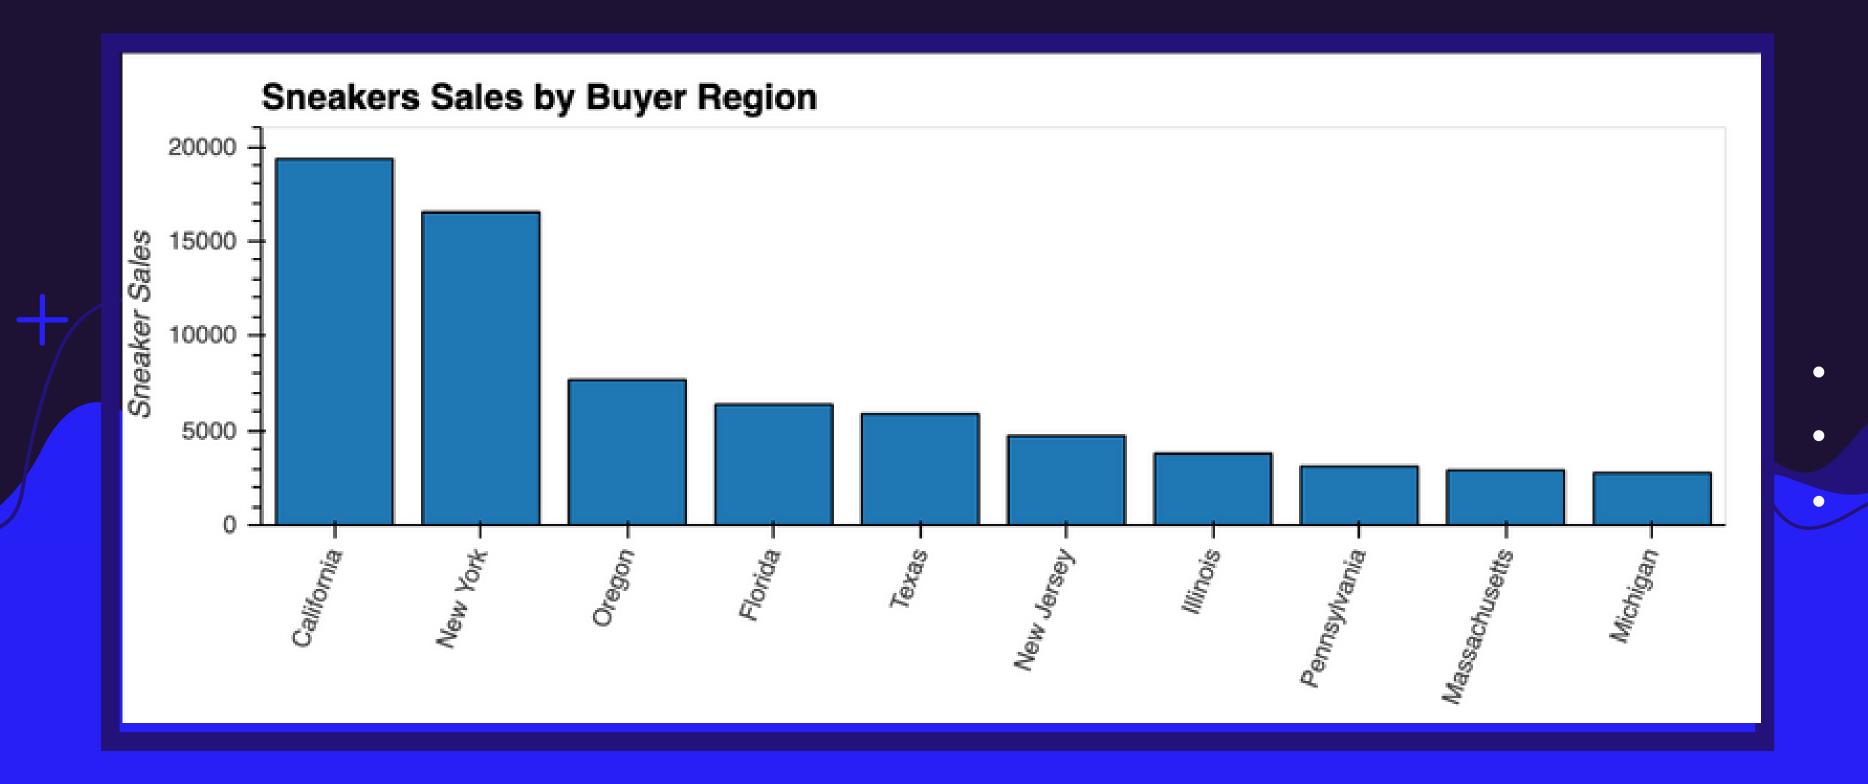

CryptoSneaks is a decentralized collectible sneaker auction market built on Ethereum.

#### Resource

#### Random Forest Regression

#### **Parameters**

```
# Define features set
X = df.drop(['sale_price'], axis=1)

# Define target vector
y = df.sale_price

# Encoding variables
X = pd.get_dummies(X, columns=["brand", "sneaker_name", "buyer_region"])
X.head()

# Splitting into Train and Test sets
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, random_state = 27)

# Create the random forest regresor instance
rf_model = RandomForestRegressor(n_estimators=500, random_state=27)
```

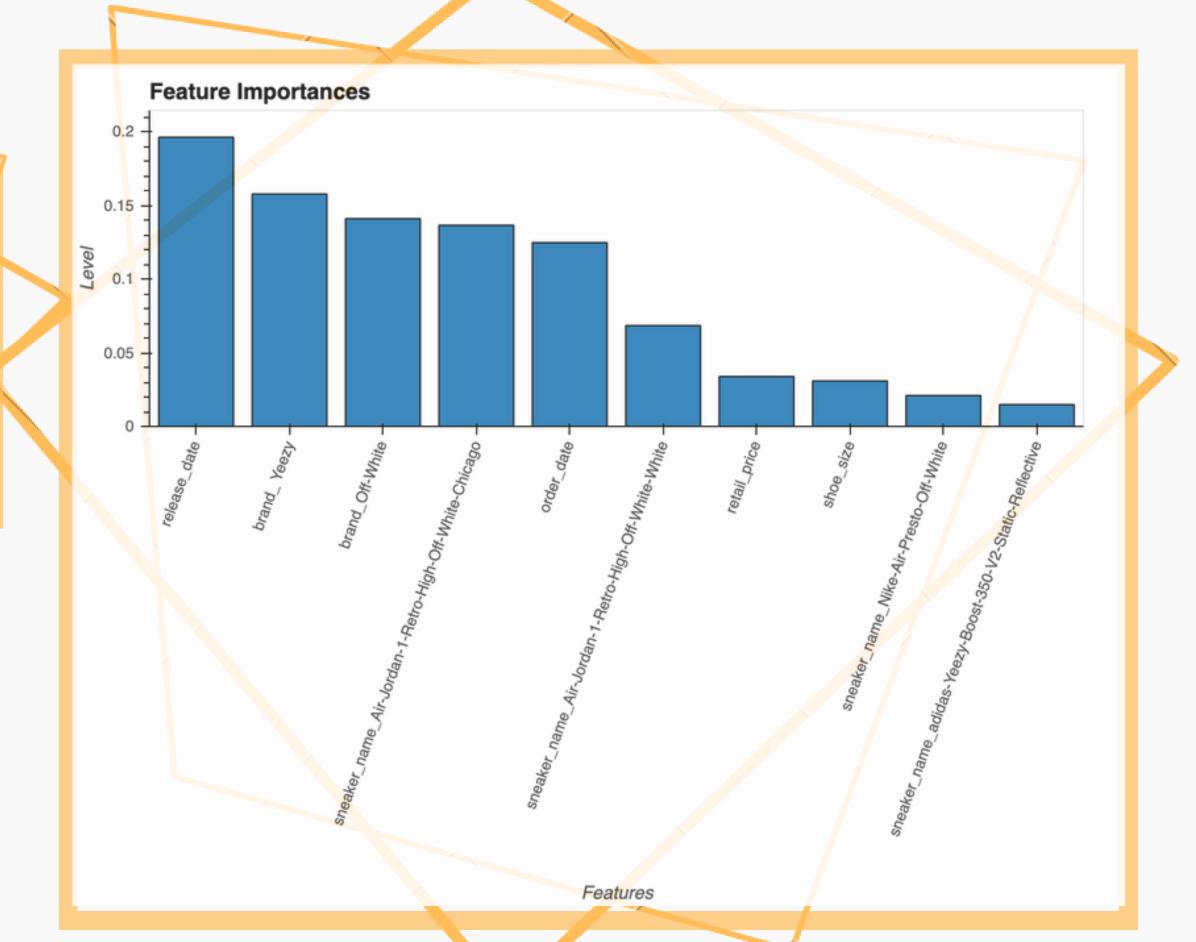

Random Forest Regression

#### Metrics

R<sup>2</sup>: 0.98

Mean Absolute Error: 14.49 Median Absolute Error: 7.10

Accuracy: 97.14%

#### Demo

#### In the near future

Accept our own ICO for auction transactions

Accept multiple different types of crypto

Allow easier peer to peer transactions

Let users register their own sneakers auctions
